

## INSTRUCTIONS

### Assembling the Gambrel and Hoist:

Parts:

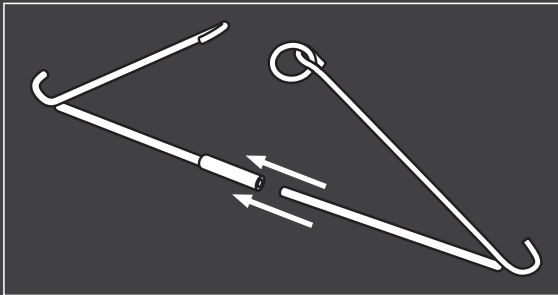

Upper pulley - A (Hook, pulley and rope lever)

Rope lever - B

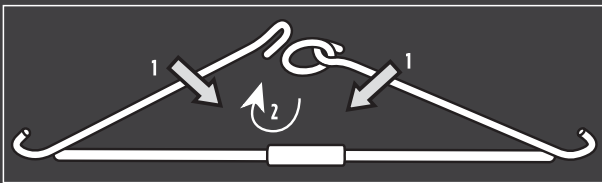

Lower pulley - C (Hook and pulley)

Gambrel - D

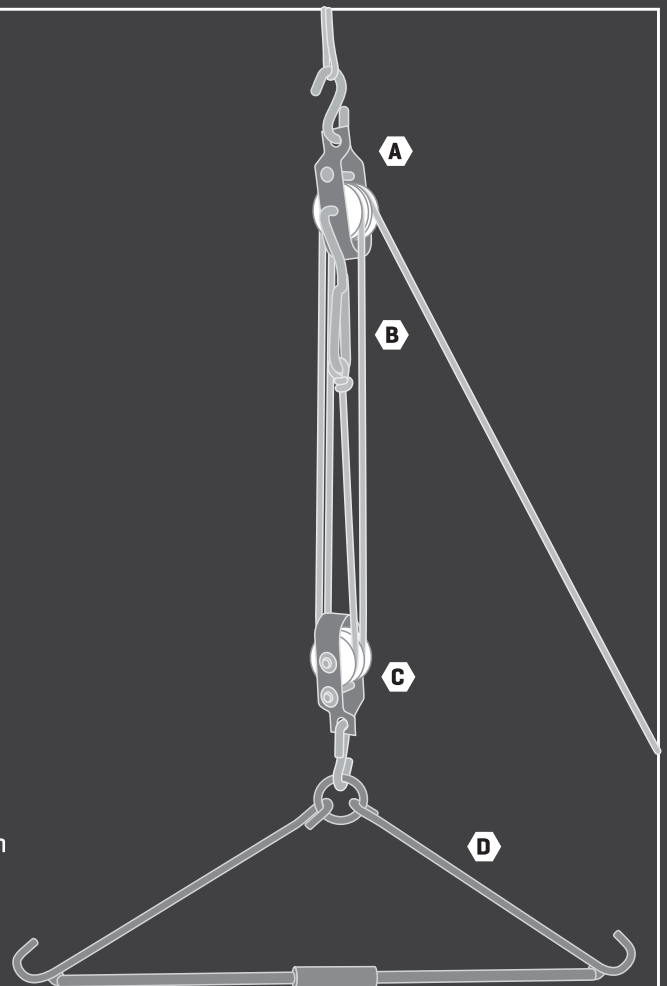

1. Assemble the gambrel halves as follows:
  - a. Slide the gambrel halves together using the sleeve on the base of the gambrel.

- b. Push the angled arms of the gambrel down and together simultaneously until they flex close enough together to push the ring over the hook on the opposite side.

2. Thread the rope through the upper pulley [A], continue the rope down through the lower pulley [C].
3. Return the rope through the upper pulley and down through the lower pulley. Tie off the rope at the rope lever [B] as shown in photo.
4. Attach the gambrel [D] to the lower pulley hook.

### USING THE GAMBREL:

Hang the game animal from the gambrel by cutting a slit between the tendon and the bone in the lower part of the hind legs (being careful to not cut the tendon) and inserting the gambrel hooks securely through each leg. Once the hooks are through the tendons and before raising the gambrel, test the attachment by putting sufficient downward force onto the attachment points to ensure they will hold the animal's full weight when hanging.

### CAUTIONS:

1. Do not use hoist to lift more than maximum weight of 440 pounds.
2. Do not stand below or within a four foot radius of hoist while operating.
3. Firmly secure the rope after hoisting animal.
